Server software Autodesk Architectural Desktop (AD) and AutoCAD LT require the installation of a server software component which allows the server to communicate to the client. The server software must run on a separate machine than the client, and usually will run in a separate operating system. The server is designated as the "workstation host", and AD/LT is the "workstation client". When both workstation client and server are installed, the server acts as an update server. The server software is called the "server component". Some server-only products are available from Autodesk as well, including Building Design Suite, Construction Design Suite, Construction Document Suite, MEP/E MEP Suite, and Fireworks. Deployment A workstation is a separate computer that can be used for executing the client software. A workstation can be an actual computer or, more commonly, a graphics card or computer monitor, connected to a main computer. The connection between the two is made using a serial port or video port, depending on the type of workstation. For instance, the Video Port is a standard hardware device. The Video Port and a Graphic Card are used to create a computer monitor. The workstation cannot store any drawings or modeling data, and cannot share any data with other computers. A server is a computer or server that connects to the workstation in order to communicate with the client, and may provide additional features. The server can communicate with other servers over a network. The server stores drawings and other information. Some servers can perform more complex functions than the workstation. Autodesk periodically updates the communication protocols that are used between the client and server, adding new features and removing old ones. Prior to version 14.1 of AutoCAD and Architectural Desktop, the client software used proprietary protocols. In version 14.1, the software switched to the current standard in IEEE P1283-2002, P1284-2000, and P1285-2001. Other versions use proprietary protocols. AutoCAD Architecture and AutoCAD Electrical use the following proprietary protocols: P1283-2002 (CEH, XCA, DDM, DDM, BER). P1284-2000 (CEH, XCA, DDM, DDM). P1285-2001 (CEH, XCA, DDM, DDM). a1d647c40b

What's New In?

Email and text markup to workgroup members have become a popular way to provide feedback about a design. AutoCAD now has two new email features that make it easier to provide and receive feedback: import and export of print or PDF files, and a new user interface for sending email messages. AutoCAD now uses Markup Assist to process the data in your imported print or PDF file. After importing a print file, you can send feedback to your team using the new "Email" feature in the "Markup Assist" dialog. When you export the file back to AutoCAD, the new text is added to the print, making it easy to incorporate the comments into the drawing. Markup Assist: Includes new features for in-application text markup. Add custom, dynamic text to drawings, tables, or CAD models. Set and apply text attributes to customized text (e.g., font, color, placement, and size). Add or replace existing text. Edit, delete, and format existing text. Inline graphics or lines can be automatically linked to dynamic text objects (e.g., lines of text, text boxes, tables, text frames, etc.) Track changes to the text and automatically show changes in your drawings. Tabs within the "Markup Assist" dialog enable you to quickly add and change text attributes, move text objects, and edit and delete text. Save your customizations by exporting them to a new template file. Application Improvements Timeline: Changes to the application and model-making process can now be viewed as they occur. Any operation you perform in the application now has a timeline that shows you the progress and duration of the operation. You can preview how changes would affect a drawing, and update your drawing to reflect the changes in the timeline before committing to the drawing. View Drawing in Three Dimensions: It's now possible to view parts of a drawing in three dimensions. After the drawing opens, click on a part, such as a wall or window, and then click on the "3D" button at the top right of the drawing window. Select options, such as Wireframe and Snap Planes, in the View drop-down list. Change View Z-Order: One of the most common operations in AutoCAD is changing the
