Run Autocad and select "Options" -> "Keygen & Profiles" Select the right profile (e.g. CNC) Now just press "Add New" on the same dialog and accept the defaults Then press "Save" on the same dialog. If the profile that you created is not yet saved on your computer, open it (with e.g. Autocad) and press "File" -> "Save" -> "Save Profile". Then run the resulting executable. It will now ask for the profile you created before. Just press "Open" and you're done. It is also possible to save several profiles in one file, e.g. myMachineX.ini
./bin/createCNCmachine.exe myMachine1.ini myMachine2.ini
myMachine3.ini that is an easy way to build a program with several profiles. The process of creating a profile is a bit manual. It needs some patience and experience, but not too much. I suggest you check the autocadhelp.com for tutorials. But they are not very detailed. It should work well enough for some less experienced users. To quote the story: "The original 1968 title for The Hobbit was not The Hobbit at all, but The Adventures of Tom Bombadil. For many years Tolkien was reluctant to publish any new material, but because of the continuing demand for new Tolkien material, Christopher Tolkien was at work on a new "Bombadil" story, "The Children of Húrin." When this was completed, Christopher Tolkien was sent the manuscript, which he found so interesting that he decided that the time was ripe for publishing it." As a Tolkien fan, this was a treat. A great read. Here's a sample: "Húrin heard the baying of the hound and then a voice outside, and the sound of a horn blow, and he ran to the door and there was a rascal standing there with a torch, and he went "Burn! burn!" and would have hurled the torch at Húrin, if the door had not caught it.' 'Now,' said Húrin, 'can you answer to your name?' And the r

To keep you connected to a project at all times, now the local links you use to move to a different location will automatically close when you go offline. With the new Local Links, you can now easily go back to a previous drawing, send the drawing to a new location, and attach files and pages of your design to a

new email. With the new Markup Import feature, you can quickly import the annotations you get from the built-in Scribble Sketch feature (which comes as standard) into your AutoCAD drawings. The annotations are now fully editable within AutoCAD.

- * Feature Update: Markup Import Simplify your design process by importing annotations, sketches and text directly from the paper onto the CAD model.
- * Feature Update: Markup Assist Capture and track changes automatically to help speed up your design process by sharing feedback from annotated paper, PDFs or other documents directly into your drawings.
- * Feature Update: Local Links Make your drawings more resilient by now closing local links when you go offline. This means your drawings will never be disconnected from the online network and will still be accessible as long as you have an internet connection.
- * Feature Update: Markup Import Import drawings from a paper-based annotation tool or similar tool so you can immediately edit your designs.
- * Feature Update: Markup Assist Automatically capture and track changes that you make to the CAD model by sharing annotations and other annotations from a paper-based annotation tool or similar tool onto your drawings.
- * Feature Update: Local Links Close local links when you go offline so you won't lose your drawings when you're away from the network.
